

Jelf Launches Specialist Group to Advise the Green Sector

Jelf, one of the UK's leading business consultancies, has launched the Jelf Renewables Group to meet the insurance and business needs of the fast growing renewable energy market.

As the appointed broker for a number of trade associations*, the group provides specialist insurance advice on how to manage the particular risks that businesses in this sector face, including public and products liability, employers' liability and professional indemnity – key covers for businesses and employees, whether they are installers, assessors, inspectors or consultants.

According to Dean Holloway, who is leading the development of this niche proposition: "We have launched this group of experts specifically to help businesses and employees operating in the renewable energy field. As the appointed broker to several industry organisations, our aim is to work in partnership with members to provide expert advice to ensure they are correctly covered for example offering Professional Indemnity Insurance to cover feasibility studies and calculations.

"With the Government's support to increase development in the Solar, Wind, Ground Source, Bioenergy and Hydro Technologies to meet the UK's commitment to the EU Renewable Energy Directive we offer a unique service and products to the growing number of individuals and businesses in this sector, including those that have larger more complex risks."
